Axios version 1.2.1
node version 18.12.1

When Axios is used in pure node script, when "axios.get" is called it throws the error:

**AxiosError: unexpected end of file**

```

-----------------------------------------------------------------------------------------------------------------------

# The solution:

Go to:
node_modules → axios → dist → node → axios.cjs

In the axios.cjs file, find the line:
```
streams.push(zlib__default["default"].createBrotliDecompress(zlibOptions));
```

It should be line 2637.

In the parentheses of the method call "createBrotliDecompress(zlibOptions)", delete the
parameter "zlibOptions".
The result should be:
```
streams.push(zlib__default["default"].createBrotliDecompress());
```

Save the file, the problem must go.
